                                                                                                                                                                                            Compounds of the structure or formula S-(L) n-B, R.1-S-(L) n-R or S-(L) n-R, are new, S is an amino terminal signaling functional domain of parathyroid hormone (PTH); L is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4); B is a C-terminal binding portion of PTH(-34) or a PTH-related protein (PTH-rP) (1-34); R 1 is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodeling, treating diseases and disorders associated with decreased tether1 activity, increasing cAMP in a mammalian cell having PTH-1 receptors, or screening for a peptide or non-peptide PTH (claimed). The new compound can be administered by inhalation unlike the large native PTH or PTH:P which avoids the need for regular injections to treat osteoporosis
                                                                  domain
rmone for
                                                               New compound comprising an amino terminal signaling functional domain linked to a carboxy-terminal binding portion of parathyroid hormone for treating mammalian conditions characterized by decreases in bone mass.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Residues 35-84 may be absent. The C-terminal gp. may be -COOH, -COO-+M are given in the specification (AAR21150-256, AAR23226 + AAR23522-559). Corresp. peptides created using residues 7-84 of bovine and porcine PTH are also claimed. All have mutations at positions 3, and/or 6, and/or 9 which result in surface side chains which are useful to modulate receptor binding and activity. They are useful as agonists and antagonists in the treatment of condi- tions or diseases involving PTH. The peptides are pref. prepd. by solid phase synthesis. See also AAR21257 (human generic). (Updated on 25-MAR-2003 to correct PA field.)
                   high yield production of polypeptides. The cassette comprises an operably linked nucleic acid sequence, where the expression of the cassette produces a tandem polypeptide that forms an inclusion body when expressed in a cell. The expression cassette is useful for producing peptide and polypeptide in a cell, preferably a tandem polypeptide that forms an inclusion body when expressed in a cell. The present sequence is that of an amino acid sequence encoded by an expression cassette of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New modified parathyroid hormone analogues - useful in treating cancer, osteoporosis, hypercalcaemia and hyper-parathyroid conditions.
This invention relates to a novel expression cassette and methods for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a palladium complex-promoted hydrolytic polypeptide cleavage process, which selectively cleaves the polypeptide at a Cyp-His cleavage site. The process comprises solubilising the polypeptide in a reaction mixture comprised of a palladium promoter dissolved in a high-concentration organic acid solvent. Also described: (1) a peptide purification process; and (2) a process for producing a peptide. The methods are useful for selectively cleaving the polypeptide at Cys-His cleavage site. The process provides a highly specific, conformationally independent, palladium promoted hydrolytic cleavage of polypeptides, including cleavage of relatively insoluble chimeric proteins in the form of inclusion bodies. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A palladium complex-promoted hydrolytic polypeptide cleavage process for cleaving the polypeptide at a Cys-His cleavage site, comprises solubilizing the polypeptide in mixture of a palladium promotor dissolved in organic acid solvent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            14;
                                                                                                                                                                                                                                   palladium complex-promoted hydrolytic polypeptide cleavage; yet-His cleavage site; palladium promoter; chimeric protein; inclusion body.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 91;

The present sequence represents chimeric protein T7tag-Vg-G5pr-CH-pth(1-34). The protein comprises parathyroid hormone (PTH). The chimeric protein is used to demonstrate the process of the invention. The protein is used to demonstrate the process of the invention. The specification describes a hydrolytic polypeptide cleavage process which calcitively cleaves the polypeptide at the Cys-His cleavage site. The process comprises solubilising the polypeptide in a reaction mixture process comprises solubilising the polypeptide in a reaction mixture containing a palladium promoter dissolved in formic acid. The polypeptide is in the form of an inclusion body, and is preferably glucagon like peptide-1 (GLP-1), GLP-2, growth hormone related hormone, contendoration promone (ACTH), parathyroid hormone (PTH), parathyroid hormone (ACTH), enkephalins, endorphins, exendins, anylins, various opioid peptides, gaegurin 5, gaegurin 6, brevinin 1, collippides, dependent insulinotropic polypeptide (GIP), glucagon, motilin, thymopoietin, thymosin, ubiquitin, saturin, calcitonin, luteinish promone releasing factor, neuropeptide Y, arither process is highly specific, and is not intestinal paptide or insulin. The process is highly specific, and is not affected by the polypeptide or the size of the cleaved peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               14;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a palladium complex-promoted hydrolytic polypeptide cleavage streeth which selectively cleaves the polypeptide at a Cys-His cleavage site. The process comprises solubilising the polypeptide in a reaction mixture comprised of a palladium promoter dissolved in a high-concentration organic acid solvent. Also described: (1) a peptide purification process; and (2) a process for producing a peptide. The methods are useful for selectively cleaving the polypeptide of Cys-His cleavage site. The process provides a highly specific, conformationally independent, palladium promoted hydrolytic cleavage of polypeptides, including cleavage of relatively insoluble chimeric proteins in the form of inclusion bodies. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A palladium complex-promoted hydrolytic polypeptide cleavage process for cleaving the polypeptide at a Cys-His cleavage site, comprises solubilizing the polypeptide in mixture of a palladium promotor dissolved in organic acid solvent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     14;

These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from altered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, inhertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New parathyroid hormone analogs, used for treating e.g. abnormal CNS or pancreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.
Human, parathyroid hormone, parathyroid hormone-related protein; PTH; PTHP; analogue; abnormal CNS function, pancreatic function; mineral metabolism; male infertility; abnormal blood pressure; hypothalmic disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ·.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides a number of parathyroid hormone (PTH) or parathyroid hormone-related protein (PTHrP) analogues. These act as PTH2 receptor agonists or antagonists and can be used in the treatment of disorders resulting from allered or excessive action of the PTH2 receptor, e.g. abnormal CNS functions, abnormal pancreatic functions, divergence from normal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or a hypothalmic disease. The present sequence is a peptide analogue of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New parathyroid hormone analogs, used for treating e.g. abnormal CNS or panoreatic functions, abnormal mineral metabolism and homeostasis, male infertility, abnormal blood pressure or hypothalmic disease.
                                                                                             Human, parathyroid hormone, parathyroid hormone-related protein, PTH, PTH+P; analogue, abnormal CNS function, pancreatic function; maineral metabolism; male infertility; abnormal blood pressure; hypothalmic dieses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

The C-terminal gp. may be -COOH, -COO-+M (M+ = cation), or -(C=O)MH2. 140 specific peptides derived from human PTH are given in the specification (AAR21150-256, AAR23226- 3250 + AAR23522-
                                                                                                                                                                  peptide employs a fusion protein construct (FPC) comprising a carbonic anhydrase and a variable fused polypeptide containing a target peptide. The method comprises precipitating either the FPC or a fragment of FPC including the carbonic anhydrase. An alternative method of producing the peptide comprises expressing the FPC as part of an inclusion body. The target peptides of the FPC are derived from growth hormone releasing factor (GRF), glucagon-like peptide 1 (GLP1) or parathyroid hormone (PTH). This sequence corresponds to amino acids 1-38 of PTH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New modified parathyroid hormone analogues - useful in treating cancer, osteoporosis, hypercalcaemia and hyper-parathyroid conditions.

The C-terminal gp. may be -COOH, -COO-+M (M+ = cation), or -(C=O)NH2. 142 specific peptides derived from bovine PTH are given in the specification (AAR22251-382, and AAR22540-549). Corresp. peptides created using residues 7-84 of human and porcine PTH are also claimed. All have mutations at positions 3, and/or 6, and/or 9 which result in surface side chains which are useful to modulate receptor binding and activity. They are useful as agoniets and antagonists in the treatment of condi-tions or diseases involving PTH. The peptides are pref. prepd. by solid phase synthesis. See also AAR21257 (human generic), AAR21258 (bovine generic) and AAR21259 (porcine generic). (Updated on 25-MAR-2003 to correct PA field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 1992-056643/07.
```

```
The present sequence is a specific example of a human parathyroid hormone (hPTH) analogue from fragment 1.34 in which at least one of the amino acid residues at positions 7, 11, 23, 24, 27, 28 and 31 is cyclohexylalanine (Cha). In this example the Leu residue at position 7 and the Leu at position 11 in the wild-type have been substituted by Cha. The hPTH analogues stimulate bone growth and so are useful in human or veterinary medicine for treatment of osteoporosis and bone fracture, optionally in conjunction with anti-resorptive therapy (bisphosphonates and calcitonin). N.B. The present sequence does not appear in the modification. It corresponds to the known hPTH 1.34 fragment with the modifications as stated in the claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New variants of human parathyroid hormone 1-34 peptide - which stimulate bone growth and are used for treatment of osteoporosis and bone fracture.
                                                                                                                                                                              Osteoporosis; agonist; PTH; human; anti-resorptive therapy; bone fracture.
                                                                                                                                                       Human parathyroid hormone analogue [Cha7,11]hPTH(1-34)NH2.
                                                                                                                                                                                                                                                                                    /

                                                                                                                                                                                                                                                                                   NUCLEOTIDE SEQUENCE.

NUCLEOTIDE SEQUENCE.

"Molecular Cloning of feline preproparathyroid hormone.";

Submitted (OCT-2000) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: PTH elevates calcium level by dissolving the salts in bone and preventing their renal excretion (By similarity).

-!- SUBCELLULAR LOCATION: Secreted (By similarity).

-!- SIMILARITY: Belongs to the parathyroid hormone family.
                                                                                                                                             Felis silvestris catus (Cat).

T-SE LOSS of kinase activity and autophosphorylation.

T-SE LOSS of kinase activity and autophosphorylation.

T-A: Loss of kinase activity and autophosphorylation. Fails to activate MAP2K1, MAP2K4, MAP2K7, CHUK and IKBKB.

T-SE LOSS of kinase activity and autophosphorylation. Fails to activate autophosphorylation.

T-SE LOSS of kinase activity and autophosphorylation.

T-SE LOSS of kinase activity and autophosphorylation.

T-SE LOSS of MP-kappa-B transcription factor activity and reduced ability to activate MAP2K1, MAP2K7, No effect on AP-1 activity or activation of CCHUK and IKBKB. Loss of binding to IKBKB.

F-SA: LOSS of AP-1 and NP-kappa-B transcription factor activity. Reduced ability to activate MAP2K1, MAP2K4, MAP2K4, CHUK and IKBKB.

M-SA: LOSS of AP-1 and NP-kappa-B transcription factor activity. Reduced ability to activate MAP2K1, MAP2K4, MAP2K7, CHUK and IKBKB.

W-SA: LOSS of AP-1 and NP-kappa-B transcription factor activity. Reduced ability to activate MAP2K1, MAP2K4, MAP2K7, CHUK and IKBKB.

M-SA: LOSS of AP-1 and NP-kappa-B transcription factor activity. Reduced ability to activate MAP2K1, MAP2K4, MAP2K7, CHUK and IKBKB.

M-SA: LOSS of AP-1 and NP-kappa-B transcription factor activity. Reduced ability to activate MAP2K1, MAP2K4, MAP2K7, CHUK and IKBKB.

L-SA: LOSS of AP-1 tand NP-kappa-B transcription factor activity. Reduced ability to activate MAP2K1, MAP2K4, MAP2K7, CHUK and IKBKB.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              activity and reduced ability to activate CHUK and IKBKR. No effect on NF-Kappa-B activity or activation of MAPZKI, MAPZK4.
MAPZK7. Loss of binding to MAPZK4.
R-AR. Loss of AP-1 transcription factor activity, no effect on NF-Kappa-B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Proton acceptor (By similarity).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 a lower level expression is seen in the liver.
-!- FTM: Autophosphorylated.
-!- SIMILARITY: Belongs to the Ser/Thr protein kinase family. MAP-kinase kinase kinase subfamily.
-!- SIMILARITY: Contains 1 RING-type zinc finger.
-!- SIMILARITY: Contains 1 SWIM-type zinc finger.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Johnson G.L., ^{\prime} A divergence in the MAP kinase regulatory network defined by MEK kinase and Raf.",

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                     November 21, 2005, 16:05:03; Search time 33 Seconds (without alignments) 77.665 Million cell updates/sec

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          163,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                         (without alignments)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ð
                                                  Compounds of the structure or formula S-(L) n-B, R 1-S-(L) n-R or S-(L) n-R, are new. S is an amino terminal signaling functional domain of parathyroid hormone (FFH), L is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4)); B is a C-terminal binding portion of PTH(1-34) or a PTH-related protein (PTH-rP) (1-34); R 1 is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone resorption and/or bone remodeling, treating diseases and disorders associated with decreased tether1 activity, increasing cAMP in a mammalian cell having PTH-1 receptors, or screening for a peptide or non-peptide PTH (claimed). The new compound can be administered by inhalation unlike the large native PTH or PTHPP which avoids the need for regular injections to treat osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9

Compounds of the structure or formula S-(L) n-B, R 1-S-(L) n-R or S-(L) n-R, are new. S is an amino terminal signaling functional domain of parathyroid hormone (PTH); L is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4)); B is a C-terminal binding portion of PTH(1-34) or a PTH-related protein (PTH-rP) (1-34); R 1 is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone resorption and/or bone remodeling, treating diseases and disorders associated with decreased tetherl activity, increasing cAMP in a mammalian cell having PTH-1 receptors, or screening for a peptide or non-peptide PTH (claimed). The new compound can be administered by inhalation unlike the large native PTH or PTHPP which avoids the need for regular injections to treat osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
linked to a carboxy-terminal binding portion of parathyroid hormone for treating mammalian conditions characterized by decreases in bone mass.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 GCUGUUUCCGAAAUCCAGCUGAUGCACGGUGGUGGUGGUGGUGGUGGUCCAUGGAACGU

Compounds of the structure or formula S-(1), n-B, R 1-S-(1), n-R or S-(1), n-R or S-(1), are new. S is an amino terminal signaling functional domain of parathyroid hormone (PTH): 1 is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4)); B is a C-terminal binding portion of PTH(1-34) or a PTH-related protein (PTH-rP) (1-34); R 1 is the PTH-receptor signal sequence; and R is (a portion of) PTH-1 receptor capal sequence; and R is (a portion of) PTH-1 receptor capal sequence; and sed for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone canodramation, bone reacorption and/or bone remodeling, treating diseases and disorders associated with decreased tether1 activity, increasing cAMP in a mammalian cell having PTH-1 receptors, or screening for a peptide or non-peptide PTH (claimed). The new compound can be administered by inhalation unlike the large native PTH or PTH-P which avoids the need for regular injections to treat osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Linker; parathyroid hormone 1-37; PTH 1-37; streptavidin; fusion protein; recombinant production; endoproteinase LysC; ds.

                                                                                                                                                                             The present sequence, which encodes a linker and the parathyroid hormone 1-37 (PTH 1-37) peptide with codon usage optimised for E. coli, was ligated to the 2.9 kb NheI-HindIII fragment of pSAM-CORE, which contains the Met (13-139) streptavidin (SA) sequence, to give pSA-EK-PTH. pSA-EK-PTH and the LacIg repressor plasmid pUBS500 were used to transform E. coli K12 RM82. The transformants were grown, with IPTG induction, in medium containing knamycin and amplicilin. Cells were harvested, lysed and isolated inclusion bodies solubilised in guanidine hydrochloride, and renatured by dilution in pH 7 phosphate buffer. The solution was clarified and the supernatant concentrated and purified on a column of immobilised iminobiotin. The purified material was incubated with endoproteinase LysC and the PTH 1-37 fragment released, recovered by SA fragment removal on an iminobiotin column followed by chromatography on a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             fractogel and reverse phase HPLC. The composition of the Lyg cleaves the fusion protein rapidly and completely, exclusively at the Lyg residue in the linker, i.e. not at Lyg residues in SA. (Updated on 25-MAR-2003 to correct PR field.)

The invention relates to a novel process for preparing recombinant human parathyroxin 1-34 peptide, including such steps as culturing a host cell in proper conditions, separating Gly-Ser-Pro-PrH 1-34 peptide (ADWH4376) severing by Pro endopeptidase to form PTH 1-34 peptide (ADWH4378) and separating and purifying PTH 1-34 peptide. The present sequence encodes the PTH 1-34 peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2 CUGUIUCCGAAAUCCAGCUGAUGCACGUGGUGGUGGUGGUGGUCCGAACUCCAUGGAACGUG 61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             inclusion body when expressed in a cell. The present DNA sequence encod a peptide which may be used in the construction of a tandem polypeptide of the invention.
                                                                                                                                                                                                                                                                   2 cuguuccgaaauccagcugaugcacgguggugguggugguggugguggaacuccauggaacgug

                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                             This invention relates to a novel expression cassette and methods for high yield production of polypeptides. The cassette comprises an operably linked nucleic acid sequence, where the expression of the cassette produces a tandem polypeptide that forms an inclusion body when expressed in a cell. The expression cassette is useful for producing peptide and polypeptide in a cell, preferably a tandem polypeptide that forms an inclusion body when expressed in a cell. The present sequence is that of a DNA sequence which encodes a polypeptide with may be produced using the expression cassette of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention comprises an expression cassette which produces a tandem polypeptide that form an inclusion body when expressed in a cell. The invention comprises an expression cassette which produces a tandem polypeptide that form an inclusion body when expressed in a cell. The expression cassette of the invention is useful for producing a peptide or polypeptide in a cell, preferably a tandem polypeptide that forms an inclusion body when expressed in a cell. The present DNA sequence encodes a peptide which may be used in the construction of a tandem polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2 CUGUIUCCGAAAUCCAGCUGAUGCACGGUGGUGGUGGUCUGAACUCCAUGGAACGUG
                                                                                                                                                                                                                                                                                                                                                                                         New expression cassette comprising an operably linked nucleic acid sequence, useful for producing a tandem polypeptide that forms an inclusion body when expressed in a cell.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to a novel expression cassette and methods for high yield production of polypeptides. The cassette comprises an operably linked nucleic acid sequence, where the expression of the cassette produces a tandem polypeptide that forms an inclusion body when expressed in a cell. The expression cassette is useful for producing peptide and polypeptide in a cell, preferably a tandem polypeptide that forms an inclusion body when expressed in a cell. The present sequence is that of a DNA sequence which encodes a polypeptide which may be produced using the expression cassette of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2 cugutucceaaauccaecucauccacucaucaucaucaucaucucaaacuccaucaaacuc 61
